

ROTATING MACHINE WITH COOLED HOLLOW ROTOR BARS

ABSTRACT OF THE DISCLOSURE

5                   A rotating machine including a rotating shaft:  
a plurality of conductive rotor bars spaced from the  
rotating shaft and fixed to the rotating shaft through at  
least one intermediate member, where at least one of the  
plurality of conductive rotor bars have at least one  
10 first internal conduit; and a circulator for establishing  
a coolant circulation through the first internal conduit.
